

RADOSLAV BONEV

Trading Operations | Financial Markets Research | Risk & Market Data Analysis

Bulgaria | r.bonev1998@gmail.com | +359 89 246 3327 | linkedin.com/in/radoslav-bonev | github.com/RDB-1998

PROFILE

Financial markets-focused analyst with 6+ years of discretionary trading experience across futures, commodities, equities and crypto, plus hands-on Python research workflows for backtesting, probability, risk, and market microstructure. Strong at turning market ideas into testable hypotheses, documenting both positive and negative findings, and communicating clearly with clients and internal teams. Background in fintech, financial-market client retention, CRM operations, and remote business development; targeting trading operations, risk monitoring, junior trading analyst, market data, and research-support roles.

CORE STRENGTHS

- Markets: futures, equities, commodities, crypto, CFDs, opening-range behavior, intraday volatility, drawdown/risk, execution context
- Research process: hypothesis design, data cleaning, backtesting, feature testing, Monte Carlo simulation, robustness checks, negative-result documentation
- Operations: CRM discipline, client issue handling, clear escalation notes, remote collaboration, customer-facing communication, process follow-through
- Tools: Python, Pandas, NumPy, Matplotlib, Jupyter, Git/GitHub, Cursor, Claude Code/Codex, DataBento, Alpaca, yfinance
- AI-assisted execution: uses LLMs for implementation support, code review, debugging, documentation, and cross-checking while owning the research framing and interpretation

SELECTED MARKET RESEARCH

NQ Market Microstructure Research - Program Null Case Study | [case study/source](#)

- Built and documented a literature-guided research program on 1-minute NQ/ES futures data from 2010-2025. Tested 106 candidate features with triple-barrier labels, walk-forward splits, embargo rules, cost assumptions, and feature gates. The work is valuable because it did not force a positive result: the final conclusion was that the tested edge was not robust enough to treat as a tradeable signal.

TQQQ Opening Range Breakout Replication | [case study/source](#)

- Replicated and extended a 5-minute ORB study on TQQQ using Alpaca SIP minute data from 2016-2026. Compared stop/target variants, position sizing, leverage constraints, annual returns, drawdowns, and risk-adjusted behavior; documented both the attractive upside and the severe drawdown/capacity caveats.

ES/NQ Opening Range Breakout and Futures Notebooks | [case study/source](#)

- Backtested intraday breakout concepts on S&P 500 and Nasdaq futures using long historical windows, probability-driven trade rules, and performance diagnostics such as return, drawdown, volatility, and risk-adjusted outcomes.

Probability, Monte Carlo, BTC/ETH Risk Analysis | [case study/source](#)

- Used Python notebooks to study expected value, conditional/binomial probability, variance, covariance, correlation, confidence intervals, Monte Carlo trade sequences, and crypto return/drawdown behavior.

TRADING & RESEARCH DEVELOPMENT

Discretionary Trading | Self-directed | 2019 - Present

- Traded and studied US market futures, commodities, equities, crypto and CFDs, building practical intuition around volatility, positioning, risk/reward, and execution decisions.
- Reviewed trade outcomes and position-sizing choices through a probabilistic lens, focusing on expected value, drawdown control, and decision-making under uncertainty.

Algorithmic Trading & Quantitative Research Preparation | Self-directed | Jun 2025 - Present

- Designed Python/Jupyter research workflows for strategy testing, exploratory market analysis, probability experiments, and visual performance reporting.
- Studied applied probability/statistics for trading, including EV, conditional probability, binomial probability, LLN, CLT, Bayes, confidence intervals, Monte Carlo simulation, and robustness/overfit risk.

PROFESSIONAL EXPERIENCE

Sales & Business Development Specialist | SAYTAR / Hybrid | May 2022 - Present

- Contributed to growth at a technology startup through business development, client outreach, sales presentations, and support for WordPress/CMS-related solutions.
- Managed CRM data hygiene and sales-process organization, helping maintain reliable pipeline visibility and follow-up discipline.
- Operated in remote/hybrid commercial workflows requiring structured communication, prioritization, and follow-through.

Business Development Specialist | Tide Business Banking / Remote | Jan 2021 - Feb 2022

- Supported international sales and business development activity in a fintech banking environment, including prospect communication, process follow-up, and pipeline discipline.
- Used CRM/Salesforce workflows and reporting to organize outreach, track opportunities, and support handoffs in a remote operating model.
- Communicated product and process details to clients and internal stakeholders with clear, structured written and verbal updates.

Customer Retention Account Manager | CMSG / Remote | Feb 2020 - Dec 2020

- Managed client accounts in a financial-market environment covering cryptocurrencies, US equities, commodities and stocks, balancing commercial goals with clear client communication.
- Maintained CRM records, tracked client status/follow-ups, and supported account-retention workflows in a remote setting.
- Handled market-related customer questions and recurring concerns, translating them into practical explanations, follow-up actions, and escalation points where needed.

TRADING OPERATIONS RELEVANCE

- Comfortable monitoring market behavior, intraday volatility, opening-range levels, news-sensitive moves, and risk/reward changes across active sessions.
- Can turn platform, market-data, or execution anomalies into clear notes for traders, product teams, support teams, or data providers.
- Understands why false positives matter: research work is documented around robustness, costs, drawdowns, data quality, and when an apparent edge should be rejected.
- Combines market curiosity with operational discipline from CRM/client-facing roles: clear records, timely follow-up, and calm communication under pressure.

PROFESSIONAL DEVELOPMENT

- Self-directed study of quantitative finance, Python for trading research, probability/statistics, backtesting practice, and financial-market structure.
- Research references include Dr. Yves Hilpisch materials, public market-microstructure papers, trading-strategy papers, and industry case studies.
- Maintains a public GitHub portfolio with documented notebooks and case studies: github.com/RDB-1998/Python-Trading-Probability

LANGUAGES & INTERESTS

Languages: English - Full Professional Proficiency; Bulgarian - Native

Interests: financial markets research, endurance training, strategy games, long-form learning projects
